

## **QA Engineer Traineeship**

### **Your position**

Enfocus is an Esko company and provides modular and affordable tools safeguarding job quality throughout the complete production chain. Innovative solutions improve communication between design and production while enhancing productivity and predictability through automation of routine tasks. Well-known product brands include Connect, PitStop and Switch.

In the position of a QA Engineer Traineeship for the PitStop Product Group, you will be part of a Scrum team and assure the quality of the software developed for the PitStop products. Candidates with creative, problem solving skills will thrive in this position.

### **Your responsibilities and key activities**

- Assist the QA team in guaranteeing quality of software projects by testing new releases carefully and reporting problems.
- Keep track of problems found during a test cycle.
- You will actively take part in the Scrum team, just like the other members of the QA team. You will come in contact with reviewing definitions of user stories and creating test cases to verify the implementation of user stories, within a development team working Scrum.

### **Your profile**

- Your passion for computers makes you skilled in working with any basic application. You have a natural interest in software.
- You want to test software, find and analyse problems; and work together with the software developers to implement solutions.
- You read and write English well as the stories which need to be tested are all written in English.

### **Competencies:**

- You are customer focused with excellent communication skills
- You are skilled in troubleshooting and problem resolution
- You are analytical and solution oriented, creative in finding workaround
- You have excellent knowledge of English
- You are a great team player and able to coordinate your own work independently
