

## Metrix Project maker

### Description

Metrix Project maker allows the automated creation of EFI Metrix 2013 and 2015 compliant project MXML files, supporting all project specific settings known from the EFI Metrix software. The MXML files can then be either imported manually into a EFI Metrix product license or can further processed in Enfocus Switch with help of one the other available Metrix apps.

### Compatibility

EFI Metrix 2013 and 2015.  
Java 1.6 and higher.

#### Compatibility third-party applications

EFI Metrix 2013 and 2015.  
Java 1.6 and higher.

#### Application discovery details

Metrix Project maker connects to a EFI Metrix 2013 or 2015 database server via JDBC. Therefore a concurrent user license of EFI Metrix is needed and the Metrix database server must be accessible via the host's IP address.

### Connections

Metrix Project maker uses TrafficLight outgoing connections. The processed job is routed according to its status (Success or Error). The created project MXML file is routed via the log connection.

### Properties detailed info

#### Flow elements properties

- Metrix database server type
  - Whether a standard Metrix database server is used or as an alternative a Microsoft SQL Server
- Metrix database server address
  - The IP address and port under which the database server is accessible via JDBC. In case of a standard Metrix database server the port will be 9939.
- Metrix database user
  - The user with which the database server will be accessed. In case of a standard Metrix database server this will be 'sa'.
- Metrix database password
  - The password with which the database server will be accessed. In case of a

standard Metrix database server this will be an empty string.
