

## Metrix Product extractor

### Description

Metrix Product extractor allows the extraction of EFI Metrix 2013 and 2015 compliant product MXMLs out of MXML files exported from EFI Metrix.

The extracted MXML files can be either re-injected into an automated ganging workflow or used for updating product specific information within MIS solutions or for removing resources (e.g. the PDF content files) of successfully processed products.

Output files are routed according to their status (Success or Error).

Extracted product MXML files are routed via a log on success connection.

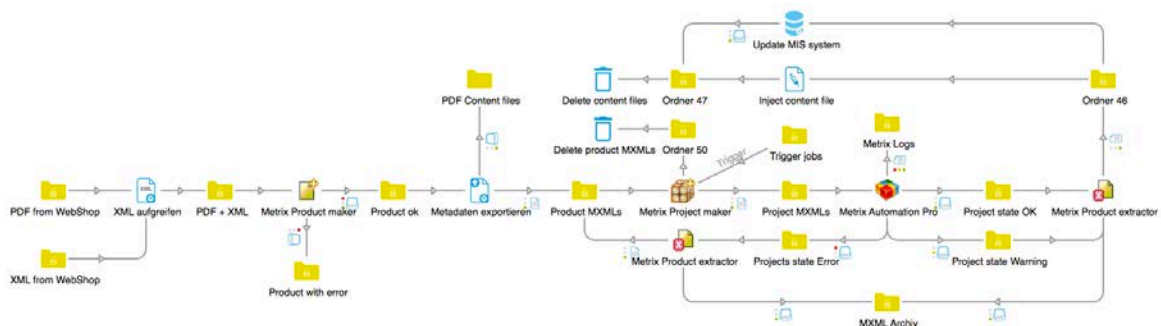

### Compatibility

Switch 13 update 1 and higher.

### Connections

Metrix Product extractor uses TrafficLight outgoing connections. The processed job is routed via data connections according to its status (Success or Error). The extracted product MXMLs are routed via the only log connection.

The following screen shot demonstrates how Metrix Automation Pro app can be integrated in a Switch flow and how typically it is used in combination with the other available Metrix apps.

### Properties detailed info

Property	Value
<b>Name</b>	Metrix Product extractor
<b>Description</b>	
<b>Metrix XML working mode</b>	Metrix XML dataset
<b>Metrix XML dataset</b>	MetrixXML
<b>Working mode</b>	Minimum sheet use
<b>Percentage</b>	85
<b>Component handling</b>	Only active components
<b>Remove output files of failed pr...</b>	Yes
<b>Product MXML Dataset</b>	ProductMXML
