

Handwriting.io Generator

Description

Generate handwriting.io handwritten images via Switch.

This application is not officially maintained or supported directly by handwriting.io.

Why Handwriting.io?

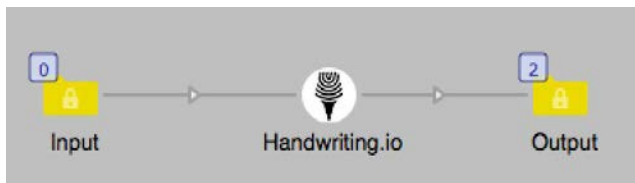

Handwriting is a great way to keep your customers' attention. Manual handwriting with a pen is costly and time-consuming. Eliminate the hassle of handwritten communications and save time and money with digital handwriting. Read more about handwriting.io [at their website](#).

Hi Thomas,

Every instance of a letter is different

Your father and I miss you so much. We hope you and Sara are having a blast in New York setting up your new apartment. Congratulations on your new job! We know you're going to be great in your new position and are excited to visit in August. Give Sara our best and we will talk soon.

Love you!
Mom and Dad

Compatibility

Switch 13, update 1 or higher.

Connections

Send jobs to the app via an incoming connection. With your flow element properties set, the app will download generated handwritten images directly from handwriting.io. The outbound connector contains the handwritten images, as a PDF or PNG.

Properties detailed info

For more descriptive requirements for property values, see the [handwriting.io documentation](#).

Distance strings

Several parameters to the render calls are of type distance string. These will look familiar to developers who have written CSS. These are of the form 20px, 72pt, or 1.5in, for example. PNG requires that all distance strings are in units of px, and PDF requires units of pt, in, m, or cm.

Access Tokens

To use the API, you will need an access token pair. Register for an account at the handwriting.io website and generate a token pair from your dashboard to get started.

Flow elements properties

- Text
 - The text you would like generated on your handwritten message.
 - You may include variables from datasets or private data.
- Format
 - Format of the handwritten message: PDF or PNG.
- Handwriting ID
 - Handwriting style ID.
 - See the handwriting catalog for choices: <https://handwriting.io/handwriting-catalog/>
- Handwriting Size
 - The size of the handwriting, from baseline to cap height.
 - Should be a valid "distance string".
- Handwriting Color
 - Controls the color of the handwritten text. Can be provided as RGB (#RRGGBB) or CMYK ((C, M, Y, K)).
 - RGB is required for PNG and CMYK is required for PDF.
- Width
 - Width of the image as a "distance string".
 - Minimum is 0px , maximum is 9000px
- Height
 - Height of the image as a "distance string".
 - May be set to "auto" to determine the height automatically based on the text.
- Line Spacing
 - Amount of vertical space for each line, provided as a multiplier of handwriting size.
- Line Spacing Variance
 - Amount to randomize spacing between lines, provided as a multiplier.
 - Example: 0.1 means the space between lines will vary by +/- 10%.
- Random Seed
 - Set this to a positive number to get a repeatable image.
 - If this parameter is included and positive, the returned image should always be the same for the given set of parameters.
- API Token Key
 - Access token API key
- API Token Secret
 - Access token API secret
