

Count Rows

Description

Count Rows counts the number of lines in a text file and puts this information into private data. There is a property that determines if you want to count the empty lines in the file or not.

Compatibility

Switch 13 update 1 and higher

Connections

The Count Rows app requires at least one input connection. When the input job is a folder there will be no attempt to determine the number of lines. The value in private data will be set to -1.

There is only one output connection.

Flow elements properties

- Private data key
This is the name of the private data key where the number of lines will be stored.
