Make JSON

Description
Make JSON will let you create a JSON-file from text and Switch variables of your selection.
This is a simple way to make JSON files for other uses in other systems outside of Switch.

This app is very simple, you have a multiline editor with variables were you can write your
own JSON-code and add values from variables. For example you can pickup an XML file in
Switch and make a JSON file out of it.

Note that there is no validation of the JSON.

Compatibility
Switch 13 update 1 and higher. Windows or Mac OSX.

   **Compatibility third-party applications**
   No third party applications are used by this app.
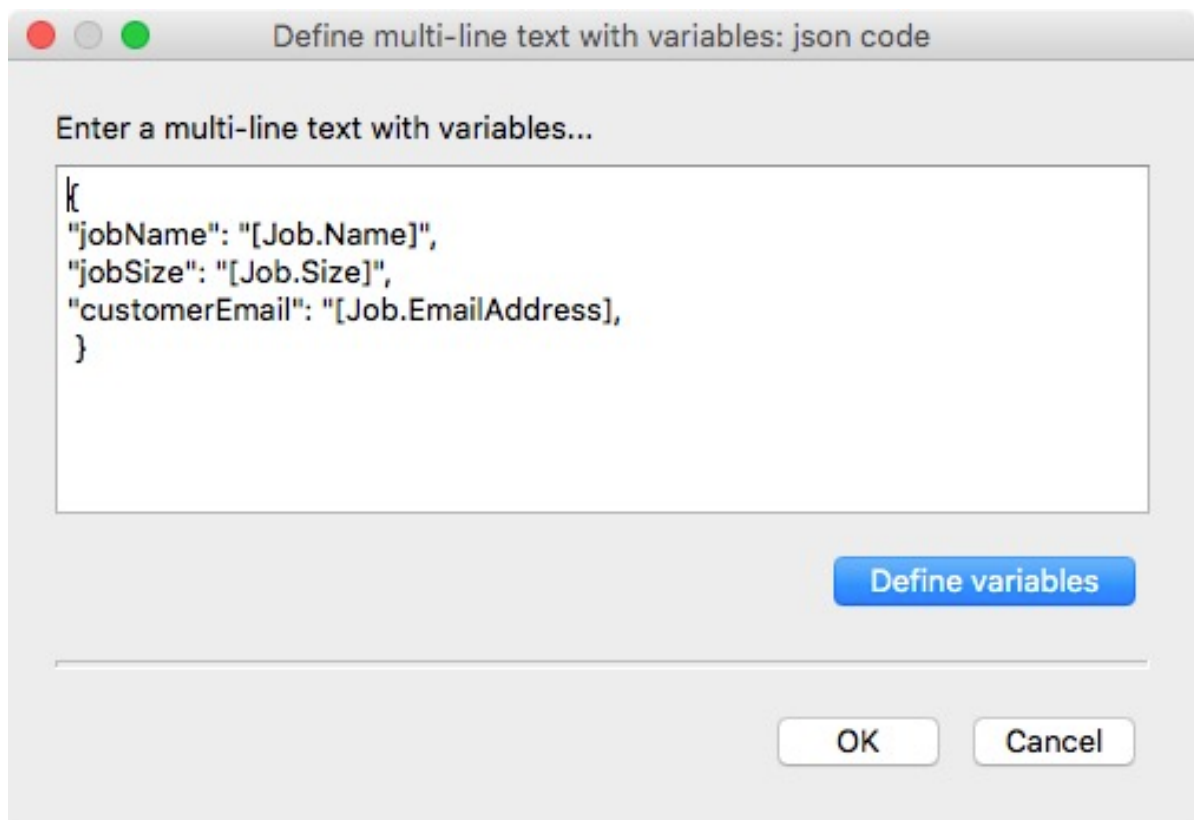

Connections
Make JSON has only one outgoing connection. No settings are available for the outgoing
connection.

Properties detailed info
There is only one property to set, the Json code it is a mulitline text field where you can add Switch variables. What you write in this field will be the content of the JSON file.

Property	Value
Name	Make JSON
Description	
json code	Multi-line text with variables defined

Define multi-line text with variables: json code

Enter a multi-line text with variables...
