# Make JSON

Description
Make JSON will let you create a JSON-file from text and Switch variables of your selection. This is a simple way to make JSON files for other uses in other systems outside of Switch.

Flow version 4

Flow version 1

This app is very simple, you have a multiline editor with variables were you can write your own JSON-code and add values from variables. For example you can pickup an XML file in Switch and make a JSON file out of it.

Note that there is no validation of the JSON in version 1

Compatibility
For Make JSON v1 Switch 13 update 1 to Switch 2017 update 1.
Make JSON v4 Switch 2017 update 2 and up.
Windows or Mac OSX.

Compatibility third-party applications
No third party applications are used by this app.

Connections
Make JSON has traffic light outgoing connection with Success and Error options. No
settings are available for the outgoing connection.
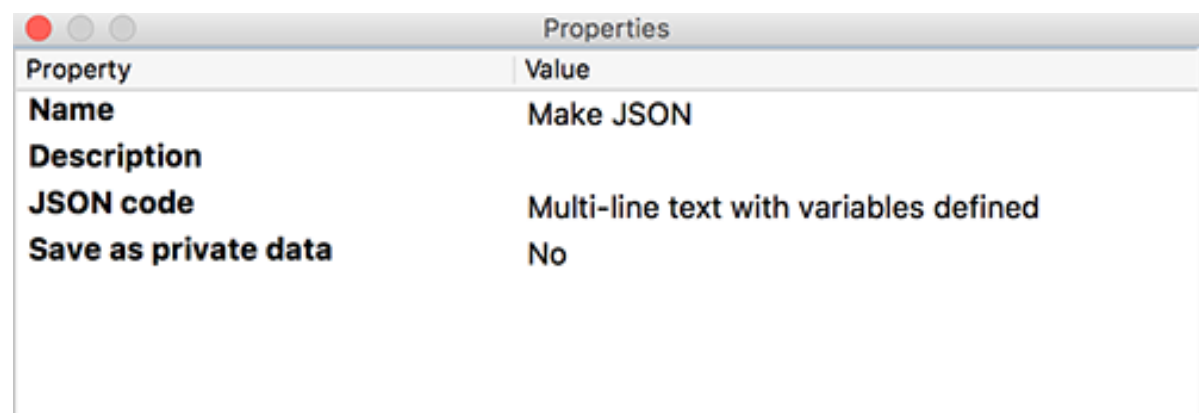

Properties detailed info
There is only one property to set in version 1, the JSON code is a multiline text field where
you can add Switch variables. What you write in this field will be the content of the JSON
file. With version 4 you have the option to include the JSON as Private data or not.
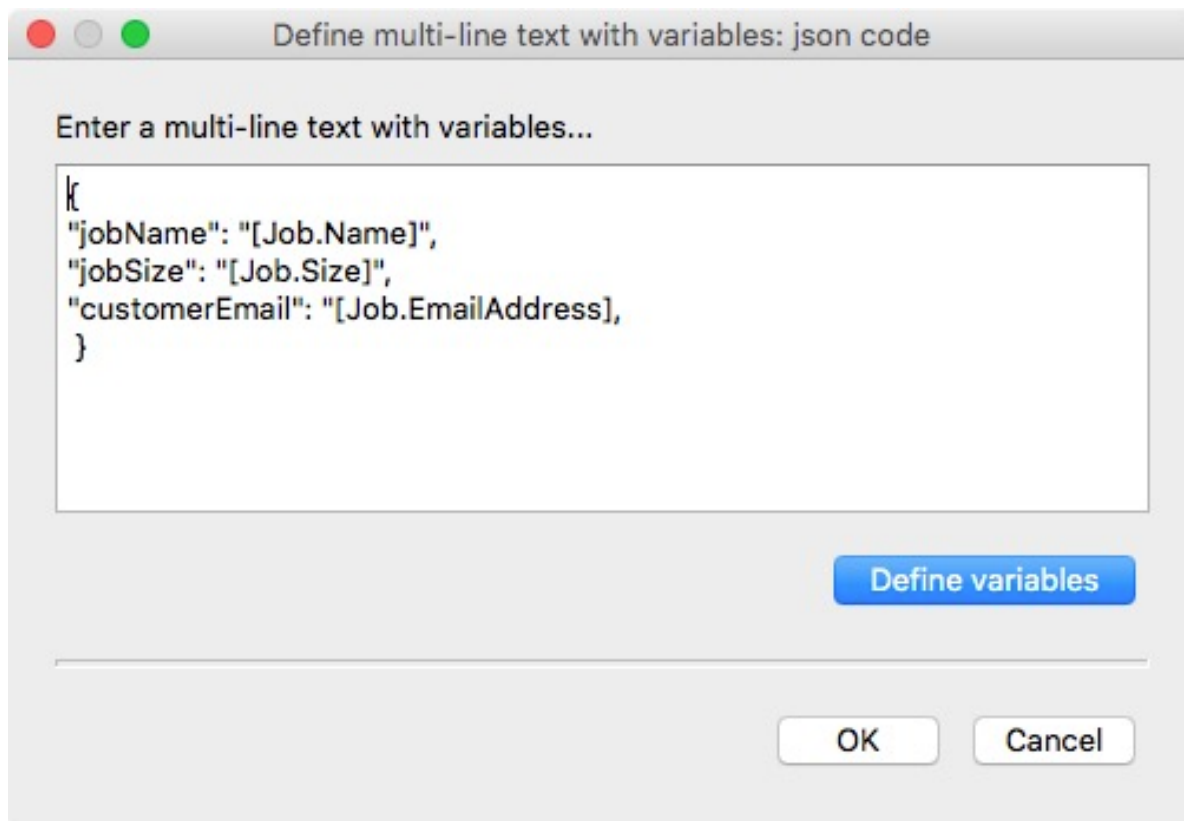

Properties version 1

Properties version 4 with option to add the JSON as Private data in to the job.
The Key to access the private date is: ***myJsonData*** i.e.
[Job.PrivateData:Key="myJsonData"]

Example of JSON with Switch variables

Whats new in version 4
Version 4 fixes a validation issue when JSON arrays where used together with Switch variables.
