

Archive Plus

Description

This script allows you to do exactly the same function as the "Archive" element from Enfocus Switch with one added functionality: remove the top folder in case of a "job folder".

Compatibility

Switch 19 update

Connections

The Archive Plus need one incoming and one simple outgoing connection

Flow elements properties

Compress

- If set to Yes, the files in the ZIP archive are compressed (default behavior).
- If set to No, the files are stored in the ZIP archive without compression, dramatically reducing the processing time; this can be meaningful when speed is more important than size, or when the files will not compress well anyway (for example, in case of JPEG images) – but you still want a single archive containing all files.

Password

The password used for protecting archives, or blank (if not password-protected).

Remove top level Folder (folder only)

In case of file, this setting will have no impact.

In case of folder :

- If set to yes, the folder won't be archive
- If set to no, the folder name will be kept at top level.

Debug Log

Optional flag to send debug messages to the log. Make sure log debugging is on:

Preferences > Logging > Log debug messages = Yes.
