

WebDAV Upload

Web Distributed Authoring and Versioning (WebDAV) is an extension of the Hypertext Transfer Protocol (HTTP) that allows clients to perform remote Web content authoring operations.

This plugin allow to upload files from jobs to a WebDAV-enabled URL.

Folder jobs are uploaded recursively, folders are created where needed to recreate job's folder structure.

Connections

WebDAV Upload plugin requires at least one input and optionally one or more trafficLight output connection

Element properties

- **URL** : WebDAV base url, with correct scheme, optionally the port and path to base.

e.g.:

`https://dav.example.com/`

`http://localhost:8123`

`https://cloud.nextcloud.com/remote.php/webdav/`

- **Username** : WebDAV user
- **Password** : WebDAV password
- **Remote path** : WebDAV path were files are uploaded. Set it to “Automatic” to use the job's hierarchy info as path.
