

# PrivateDataRandomizer

## Description

Private Data Randomizer allows you to randomly choose the value of privateDatas from a list of elements.

## Compatibility

Switch 2020 fall (Node.js).

## Connections

At least one incoming connection.  
One single outgoing connection.

## Use cases

- Choose between several forms of politeness for your emails.

## Flow element properties

- **Set job private data**

The private data to attach to the jobs passing this element.

Each private data item should be specified on a separate line by a string in the format :

```
key=value1|value2|value3 *
```

- **Examples :**

- 1d6roll=1|2|3|4|5|6
- greeting=Dear|Hello|Hi|Greetings
- letterEnding=Best regards|Thank you for your time|Reach out with questions|Let me know if you need anything

- **Value could be:**

- 1d6roll => 5
- greeting => Dear
- letterEnding => Let me know if you need anything

- **Private data separator**

'Private data key separator' will be the character separating the private data name from his possible value.

The default choice is '=' (equal).

- **Value separator**

'Value separator' will be the character separating the values to be chosen randomly.

The default choice is '|' (pipe).

\* *Private data key separator (=) and value separator (|) can be changed in their own properties.*
