Create log

Description

Create log is the simplest way to create a text file directly stored as a dataset.

Compatibility

Switch 2020 Fall (node.JS).

Connections

At least one incoming connection.
Traffic Light outgoing connection.

Flow element properties

- **Log name**

  Proper name of the log file.
  If default value is set, then the log name will be "[job.NameProper]_log"

- **Log type**

  Type of the log that will be generated. It will use this property as an extension.
  If you want a custom extension, choose the "Custom" option.

- **Custom log type**

  Custom log type of the file that will be generated. It will use this property as an extension.
  Only available if "Log type" is set to "Custom".

- **Dataset name**

  The name of the dataset in which the specified metadata fields will be stored.
  If the Log type is readable by switch, the proper model will be used, otherwise, it will be stored as an Opaque dataset.

- **Log content**

  Content of the output log file.
  The content will not be parsed nor validated, it will be printed as is.

- **Encoding**

  Character encoding to use.
  Possible values:
  - utf8
  - utf16le
  - latin1
