

Split Excel

Description

The Split Excel app will take an incoming Excel file and split up the sheets in to separate Excel files. It does nothing else. If the Excel workbook has hidden sheets they will not be handled. The output is only for sheets that are visible in the Excel workbook.

The output files will be named like this: ***Filename-Sheetname.xlsx***

Compatibility

Switch 2020 fall and higher. Windows or Mac OSX.

Connections

This app can have several input or output connections. No settings are available of the outgoing connection.

Properties detailed info
