Remini

Description

Connect Remini in any of your flows. Design, build, and automate anything for your work by integrating Remini.

The Remini App provides access to their **cutting-edge AI image enhancer,** making it possible to bring this directly to your Flows. More information can be found here.

When enhancing an image, the following file formats are currently supported:

- PNG - Portable Network Graphic
- JPG / JPEG - Joint Photographic Experts Group
- TIFF - Tag Image File Format
- WEBP - Web Picture format
- GIF - Graphics Interchange Format
- PSD - Photoshop Document
- HEIC - High Efficiency Image Container
- HEIF - High Efficiency Image File
- AVIF - AV1 Image File Format

Compatibility

Switch 2022 Fall and higher. Windows or Mac OSX.

Compatibility third-party applications

Compatible with the Remini Developer API version 1

Connections

The app has an incoming connection and a traffic-light output connection.

The result of the translation is sent to the data success connection.

The original file will be outputted to the log success connection, when outputting data and log in the same connection the original file will be embedded as an opaque dataset and can be exported afterwards using the "Export metadata" default app.

The data error connection is used when the upload or download fails. More information on the reason why a job has failed can be found in the messages.
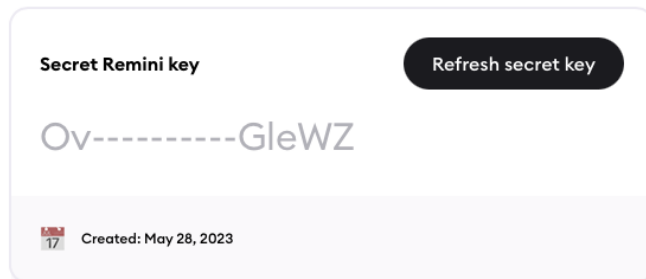

Properties detailed info

Flow elements properties

- **API Key:** You need an authentication key to access the API. You can find your key in your account settings. It is important to keep your key confidential.

- **Face Enhance:** The Face Enhance tool improves the quality of each face in the image, by increasing the resolution and reconstructing details. It uses a generative AI model, so it may create details that are missing in the image. The available modes are Default and Beautify. While both generally produce a good result, the latter one also adds a beautification effect to the faces.

- **Background Enhance:** The Background Enhance tool doubles the resolution of the image trying to recreate missing details. When used in combination with the Face Enhance tool, it's applied to everything that is not recognized as a face, including other parts of the human body and clothes. The Default mode needs a few seconds to run and works well in most of the cases. The Professional mode gives better results but is slower.

- **Color Enhance:** The Color Enhance tool analyzes the colors in the image and applies a color correction. There are several modes that correspond to different color styles: New York, Jakarta, Naples, Mumbai, Chicago, Edinburgh and Madrid. The New York mode is the one that our users like the most. We suggest you to try them out and pick your favorite style.
