

Apple Automator

This app drives Apple's Automator utility included in Mac OS X. It executes a specified Automator flow on each incoming job. The incoming job (file or job folder) is passed as input data to the first action in the Automator flow. If there is an outgoing connection, the result of the last action in the Automator flow is passed along the connection. Otherwise the result is lost.

Keywords

If you enter one of the following keywords in the Search field at the top of the Flow elements pane, the **Adobe Acrobat Professional** app will be shown in the list:

- AppleScript
- script
- custom

Connections

This app requires at least one incoming connection and allows only one single outgoing connection.

Properties

Property	Description
Element type	The flow element type: Apple Automator. This property is useful to identify renamed flow elements. It cannot be changed.
Name	The name of the flow element displayed in the canvas.
Description	A description of the flow element displayed in the canvas. This description is also shown in the tooltip that appears when moving your cursor over the flow element.
Automator workflow	The Mac OS X Automator flow to be executed for each incoming file or job folder.
