autoFlow Connect

Description

The autoFlow[™] Connect App bundle is part of a pre-built workflow automation solution, built on the customization and flexibility of the Enfocus automation platform. Workflow automation made simple... simple aF!

These Apps are intended for use with autoFlow[™].

autoFlow[™] is a web based Client/Server workflow automation interface built on an Enfocus Switch/PitStop Server foundation using the autoFlow REST API app to manage metadata driven workflows

The Connect App will make calls to the autoFlow REST API and return a JSON log and private data that will be used as business logic in Switch Flows.

Connections

The autoFlow[™] Connect App supports multiple incoming connections and uses a traffic light outgoing connector that supports success, error, data & log.
