

## ONYX Switch Status™

### Description

The ONYX Switch Status app enables users to retrieve and utilize job status change notifications as jobs move through the print production workflow. Designed to work with ONYX Switch Connect, notifications include when a job is printing, has printed, has failed, or has moved from the active to the buffered job queue. The buffered job queue in ONYX software includes completed, deleted, on-hold, or failed print status jobs.

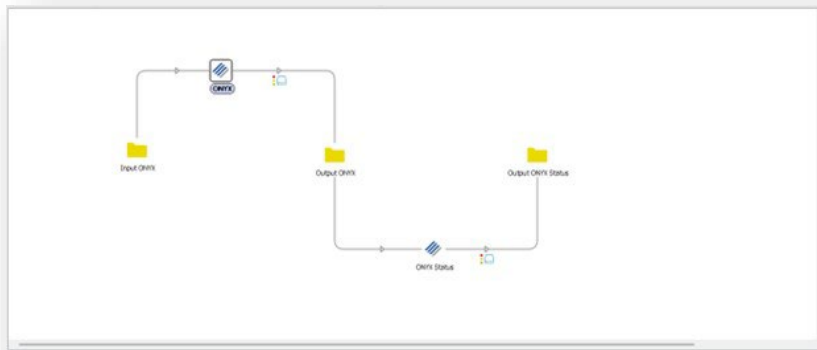

### Compatibility

Switch 2023 Fall and higher.

### Required applications

ONYX Switch Status™ requires a subscription to ONYX Switch Connect™. Adding ONYX Switch Status™ allows users to receive additional job status information.

### Application discovery details

Link included on ONYX Switch Status™ app page or follow the link above.

### Connections

ONYX Switch Status™ requires ONYX Thrive version 22.5 and higher.

### Properties detailed info

Setup and detailed instructions are available on the ONYX Switch Status™ app page. Download the “ONYX Switch Status™ App Configuration.pdf” for additional information.

### Flow elements properties

- Uses JDF files submitted through ONYX Switch Connect™ to create reports and notifications on printing workflow status, such as the following:
  - When Job Printing
  - When Job Printed
  - If Print Failed
  - Buffered Job Queue Info
    - Job moved, deleted, on hold, or archived.
