

STORE-IT

Description

The app stores files in a specified directory hierarchy.

Features of the app

- The hierarchy root can be specified from a private data variable or a variable from meta-data
- There are various ways to specify the hierarchy. Use Set hierarchy path(standard switch app), just in time(specify hierarchy in the app config) or specify a folder hierarchy by means of a list(multi-line variables or multi-line inline text)

Overview of configuration options

Element	Options	Element Type	Description
Name		String	Name of script element in Switch.
Description		String	Description of element in Switch.
