

## Clipdrop Text to image

### Description

**Clipdrop Text to image** allows the generation of new images based on a short textual description (prompt) of the expected image content using state-of-the-art algorithms based on *artificial intelligence*.

The app makes use of the payable REST API from [Clipdrop.co](https://clipdrop.co).

### Compatibility

Switch 2022 Fall and higher.

### Compatibility third-party applications

Clipdrop REST API.

### Connections

This app needs one incoming and an outgoing connection. The incoming one acts solely as a trigger. The outgoing connection delivers the generated new image file in a PNG image format.

### Properties detailed info

#### Flow elements properties

- API key  
A valid API key generated from within your [Clipdrop user account](#).
- Prompt  
Text describing the desired image, with a max length of a 1000 characters
- File name suffix  
An optional file name suffix which forms the name of the generated image file together with the job folder name.
