

## Clipdrop Remove text

### Description

**Clipdrop Remove text** allows the removal of text that appears on a given JPG or PNG image.

The text parts of the image that are removed get replaced by suitable background colors and structures that fit seamlessly and harmoniously into the overall image using highly advanced algorithms based on *artificial intelligence*.

The app makes use of the payable REST API from [Clipdrop.co](https://clipdrop.co).

### Compatibility

Switch 2022 Fall and higher.

### Compatibility third-party applications

Clipdrop REST API.

### Connections

This app needs one incoming and an one or more TrafficLight outgoing connections. The incoming one should deliver a PNG or JPG image with a maximum resolution of 16 megapixels and a max file size of 30 Mb.

The Data on Success outgoing connection delivers the successfully generated image in PNG image format and the same size as the original image. If the input image specifications are not met the original image is moved via the Data on Error outgoing connection.

### Properties detailed info

#### Flow elements properties

- API key  
A valid API key generated from within your [Clipdrop user account](#).
- File name suffix  
An optional file name suffix which forms the name of the generated image file together with the original image file name.
