

## Add Private Data

### Description

This app allows you to add up to 30 custom private data variables to an incoming job. Each field can be populated using one of the following methods:

- Inline Value
- Regular expression
- Single-line text with variables
- Script Expression

### Compatibility

Switch 2023 Fall and later.

### Connections

The app has an incoming connection and a single output connection. In the event of an error, the job fails.

### Properties detailed info

The app provides 30 pairs of key and value fields containing string info, allowing storage of up to 30 private data variables.

### Flow elements properties

- **Key 1 to Key 30:** Each key represents the identifier used to access the corresponding private data.
- **Value 1 to Value 30:** Each value field holds the data for its corresponding key and can be defined using an inline value, regular expression, single-line text with variables, or script expression.

### Outgoing connections properties

- No properties for outgoing connections.
