

## Check Folder Existence

### Description

This app verifies the existence of a specified folder by checking the provided folder path. Perfect for workflows that depend on certain directories or mounted network volumes being available, it ensures efficient file management by identifying missing or incorrectly specified folders before further processing.

### Compatibility

Switch 2023 Fall and later.

### Connections

The app has an incoming connection and traffic light output connections. In the event of an error, the job fails.

### Flow elements properties

- **Folder Path:**  
The path of the folder to be checked
- **Fail job if folder is missing:**  
In the case that the specified folder is missing, the further behavior of the job can be altered by this dropdown menu:
  - If the dropdown value is set to 'Yes' (true) the job becomes an error job in the problem jobs folder and can be retried later.
  - If the dropdown value is set to 'No' (false) the job is being redirected to the red connection of the traffic light output.

### Outgoing connections properties

- No properties for outgoing connections
