

Review 2349

Release notes

New features and improvements

This release will introduce a range of new features and improvements, including:

Customization, creation of themes:

- You are now able to create your own unique themes that will enable you to customize the viewer and collections environment. This update allows for the creation of multiple themes, each customizable with distinct logos, company information, and post-approval options. While this release primarily focuses on theme creation, the forthcoming 2403 release, scheduled for January 16, 2024, will incorporate the functionality to apply these themes to the viewer and collections environment.

Switch Review app:

- We've expanded our outgoing connections by introducing a new connection type named "Reminders." This enhanced functionality enables automated reminder emails to be sent to your customers at specific intervals determined by the defined due date. For instance, you can effortlessly schedule a reminder email containing customized content to be sent 2 days before the due date, along with another type of email 1 day before. This capability streamlines the automation of monitoring the approval process, empowering you to efficiently manage and track approvals.
- The "None" option has been introduced for the button color property in the "Reviewed file" connection type, allowing the button to adopt the color scheme of the viewer environment when selected.

Viewer:

- Improvement: Resolved an issue where the Quality report failed to fully display the text and lacked complete visibility when hovered over.
- Improvement: Addressed the issue that previously hindered users from accessing clickable URLs within customized Preflight reports in the Quality Report section of the Review viewer.
- Improvement: Added the functionality to be able to collapse the document information in the tools section.
